PUB TYPE Guides - Non-Classroom (055)
EDRS PRICE Document Not Available From EDRS.
DESCRIPTORS *Educational Facilities; Energy Audits; Energy Conservation;
*Energy Management

ABSTRACT

This booklet explains how to develop and implement a plan to manage energy in educational facilities. It can be used to identify energy savings opportunities and implement a plan to reduce energy costs. It discusses the following steps for creating an effective energy-use plan: (1) get started and organize for success; (2) look at energy use and costs; (3) perform an energy audit; (4) identify energy savings opportunities (in lighting, HVAC, building envelope, and hot water); (5) consider an energy management system; (6) evaluate costs and payback; and (7) implement measures and monitor performance. It also discusses capitalizing on the opportunities created by deregulation, and seeking outside assistance. The booklet includes a glossary. (EV)
